

CASE NO.: 1128.007  
Serial No.: 10/615,467  
July 17, 2005  
Page 8

PATENT  
Filed: July 7, 2003

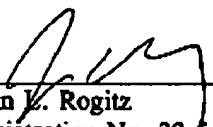

Remarks

Reconsideration of the above-captioned application is respectfully requested. The indicated allowability of Claims 10, 11, 19, and 20 is gratefully acknowledged. The limitations of Claim 10 have been moved into independent Claims 1 and 22, and these claims will not be further discussed, leaving only independent Claim 13 at issue, which has been rejected under 35 U.S.C. §103 as being unpatentable over Zhang et al. '782 in view of Dayus '954, and also as being unpatentable over these same two references in reverse order.

To overcome the rejection, Claim 13 has been amended to bring out the robustness of the present power supply, namely, that it can use an input voltage of 100 volts as well as one of 270 volts as disclosed on, e.g., page 7, line 16 through page 8, line 2 and the abstract ("the motor can be powered by a universal power supply that can operate at anywhere from below 100 volts to above 270 volts"). This feature has not been taught or suggested in any of the applied references.

The Examiner is cordially invited to telephone the undersigned at (619) 338-8075 for any reason which would advance the instant application to allowance.

Respectfully submitted,
